

macOS · OMNIWM WORKFLOW CHEATSHEET

OmniWM workspaces · Corne HOST actions · MacBook equivalents

WORKSPACE MODEL

Persistent workspaces and deliberate new-window defaults

WORKSPACE	ROLE	LAYOUT
1 WEB	Browser / research	Niri
2 DEV	Editor / development	Niri
3 COMMS	Chat / email / meetings	Default
4 RUN	Running apps / testing	Niri
5 AUX	Miscellaneous	Niri

CONSERVATIVE ROUTING

Chrome / Safari / Zen / Firefox / Dia / Helium / com.google.chrome.for.testing → WEB

Codex / Zed / com.microsoft.VSCode / md.obsidian → DEV

Spotify / Discord / Outlook / Messages / dev.vencord.vesktop / com.vng.zalo → COMMS

CORNE HOST ACTIONS

Semantic window, workspace, and desktop actions for daily use

Workspace	WEB / DEV / COMMS / RUN / AUX
Move→workspace	WEB / DEV / COMMS / RUN / AUX
Focus	← ↓ ↑ →
Move	← ↓ ↑ →
Window	Prev WS Size Full Float
Desktop	Launch Quake NewTerm Prev Win LANG Overview

MACBOOK SHORTCUTS

Karabiner Option chords, native OmniWM controls, and app launchers

CHORD	ACTION	CHORD	ACTION
⌘1...5	workspace	⌘Enter	terminal
⌘⇧1...5	move workspace	⌘B	browser
⌘H/J/K/L	focus	⌘E	yazi
⌘⇧H/J/K/L	move	⌘Space	palette
⌘⇧Tab	previous workspace	⌘- / ⌘=	column width
⌘Tab	previous window	⌘⇧- / ⌘⇧=	window height
⌘.	size	⌘⇧R	reset height
⌘⇧O	overview	⌘T	tabbed column
⌘⇧Return	fullscreen	⌘⇧F	full-width column
⌘⇧Space	float	⌘Home / ⌘End	first/last column
⌘`	Quake	⌘⇧⇧← / →	move column

BEHAVIOR NOTES

The same semantic actions follow the active layout

Niri:

Size → 33 / 50 / 67 / 100% container span

Dwindle:

Size → cycle split ratio when a workspace selects Dwindle

Quake

= OmniWM embedded persistent drop-down terminal

NewTerm

= independent Ghostty window in current workspace

Hold Option ~200 ms

= reveal OmniWM workspace bar after ~200 ms

Launch shortcuts and workspace shortcuts remain separate concepts.
